

Job title: Product Owner / Software Delivery Manger

Salary: £60k – £85k

Principal Responsibilities:

You will be an integrated part a team providing thought Leadership and delivering software capability and associated change to the customers Mission Critical Enterprise. You will support the Architecture Team in the discovery and capture of all aspects of the current Enterprise, utilised by the customer. You will be responsible for the detailed definition, delivery, co-ordination, test, and acceptance of specific interventions that will provide business change through key capability drops, supporting transition of the entire Enterprise towards the desired future operating model.

You will have previous experience in similar roles and as such we would expect you to:

- Have significant experience and be well practiced in Solution Architecture and in the delivery and roll out of software capability.
- Have experience and be practiced in the application of Enterprise Architecture.
- Able to engage with Stakeholders at all levels and be willing to politely challenge the existing Enterprise State.
- Have significant experience and be well practiced in the integration and delivery of software capabilities.
- Be well practiced in the capture, recording and prioritisation of requirements and be able to define detailed success criteria.
- Understand and apply Systems Engineering techniques.
- Understand and apply the full Agile software engineering delivery model.
- Have a thorough understanding of software integration, testing and acceptance.

Due to the nature of the work undertaken:

- You must be eligible to live and work in the UK.
- Through the domain and project type that you will be working within, you must be a UK National and be prepared to undertake a UK Government Security Clearance.
- You must be prepared to undertake regular travel throughout the UK.
- You must be prepared to undertake some international travel.
